Dear Sir:-

We herewith take pleasure in handing you special list No. 80, in which you will find as large and varied a collection of Orchids as it is possible to find anywhere. You will also find listed some of our native hardy orchids, but these we can only furnish in the Spring and Fall.

ALL PLANTS MARKED \times ARE HYBRIDS.

In ordering please use number in left margin only and give number of list.

All prices in this list are net cash, F. O. B. Summit, N. J., but 2% may be deducted when remittance is sent with order.

Trusting to be favored with your valued order.

We are, yours respectfully,

LAGER & HURRELL.

ORCHIDS, CULTURAL DIRECTIONS

The orchids are without question the most beautiful and most lasting flowers in all the floral kingdom, and also the easiest grown plants of any, if a few common-sense points are observed.

- Ventilation—Orchids delight in fresh air at all times when weather permits. During the warmest part of the summer months it is beneficial to leave the ventilators slightly open at night.
- Shading—The glass should be lightly shaded from about February 15th to September 1st, or the sun will burn the plants. During the rest of the year clear glass is desirable.
- Watering—When watering see that plenty is given and then allow the plants to dry out before giving more, this will keep the compost in the posts in good condition for a long time. The atmosphere in the house should be moderately moist.
- Temperature—A night temperature of 58 to 60 and correspondingly higher in the daytime will suit the greater number of orchids. (For such as Cattleyas, Brasso-Cattleyas, Laelio-Cattleyas, and most Laelias, a night temperature of 60—65 degrees, and 65—70 degrees in the daytime or higher, with sun and ventilation is desirable.)
- Potting—Firm potting is absolutely necessary. Orchids will not grow well and thrive if loose in the pots or baskets. In repotting, care should be taken not to disturb the roots, rather break the pots, while the baskets may be taken apart carefully and the plants placed in new baskets, working the material around the plants firmly. This is generally done by placing the material used between the rim of the pot or basket, and the ball of the plant pressing the material towards the plant. When no more material can be conveniently used, it will be found the plants are very firm in the receptacle. Avoid overpotting and do not disturb the plants unless necessary.
- Materials for Potting—The best material for potting orchids is osmunda fibre, commonly called peat. A few lumps of charcoal and pieces of broken pots may be added to advantage, also a little live sphagnum moss.
- Time for Potting—In the greater majority of cases the time for potting is immediately after the plants finish flowering. The plants are more dormant than at any other time, notably such as Cattleyas, Laelias, Oncidiums, and Odontoglossums and many more. With these general directions, anyone will be able to grow orchids and reap a rich harvest of these exquisite flowers.

CALANTHES

The Calanthes are terrestrial orchids, that is they grow in soil. Nearly all of those listed below are deciduous.

The potting material should be fibrous loam, fine chopped orchid peat, a little sphagneum moss, leaf soil if available, sand and a sprinkling of ground bone meal, all mixed well. Plenty of drainage in the bottom of the pots is necessary. In potting the bulbs, press them down firmly, about ½ deep so that they will not topple over. After potting keep the bulbs shaded from the sun and water very sparingly at first, in fact for two or three weeks, light overhead syringing is better, and as the new roots appear increase the water gradually, and when the plants are in full growth they require plenty of water until the flower spikes are formed and the flowers develop, when water should be reduced to a minimum as the flowers are liable to spot. After the flowers are cut, no more water should be given and the bulbs put in a dry place until signs of the new shoots appear at the base of the bulbs, when repotting into fresh soil may be done.

Shake out the old soil from the bulbs, cut the roots to within an inch from the base of the bulb; this will help to hold them firm until new roots are made. Shading of the glass all through the season of growth is necessary. A warm temperature, with plenty of atmospheric moisture during the growing season is necessary.

No orchids are quite as easy to grow by anyone as the Calanthes. Any kind of a greenhouse will do where heat and moisture are

available.

No. Name

The handsome sprays with numerous flowers are truly magnificent and unsurpassed for cut flowers, the keeping qualities of which are excellent. All of those listed below are winter flowering. except C. Regnierii, which flowers in the spring.

DENDROBIUM

Most of the commercial Denrobiums are easily cultivated, and their brightly-colored flowers are freely produced if it is borne in mind that as a general rule they require heat and abundance of moisture when growing, a season of cooler temperature, and a reasonable exposure to air and light to ripen the growth, and a drier season to produce and mature the flowers.

Many of the Dendrobiums flower in the early spring from March to May, notably Dendrobium Nobile and its numerous varieties in shades of white, lavender and purple. Also other species and Hybrids in colors of white, purple and yellow. Nothing is more pleasing to the eye than a collection of these plants in flower.

EPIDENDRUM

The Epidendrums require the same treatment as the Cattleyas. Most have long, flexuous pseudo bulbs producing the flowers in round heads at the apex. They are very attractive; the colors of the flowers being in most cases rose, bright red, and yellow. The flowers are small but very numerous in the heads. Exceptionally free and easy growers, they may be planted out against pillars or walls where they make a splendid show when in flower.

LAELIA

The Laelias are closely allied to the Cattleyas, hence the two readily intercross, the result being Laelis-Cattleya, of which there

are at present a great variety.

The culture is practically that of Cattleya, although the Anceps section prefer a somewhat lower temperature, but if such facilities

are not at hand, they grow quite well with the Cattleyas.

The Albino forms of L. Anceps are particularly valuable for cut white orchids. These include such as Alba Hilliana, Percivaliana, Sanderiana, Stella and Williamsii.

All the L. Anceps have 2-6 flowers on tall stems, 3-4 inches across. White L. Purpurata carries 3-9 flowers on a stem, and as large as Cattlevas.

LAELIO-CATTLEYAS

These are Hybrids between Laelias and Cattleyas. They are as a rule of a stronger constitution than the Cattleyas, notably such as have been crossed with Laelia Purpurata; to mention a few, such as L. C. Aphrodite, Canhamiana, Calistoglossa, Dominiana, Eximia, L. C. × Luminosa is also very strong growing, but is a L. Tenebrosa cross.

The treatment of Laelio-Cattleya is practically the same as Cattleyas.

The flowering season is not, however, as fixed as that of the parents; they vary a great deal and are liable to flower at almost any time. The variations in colors is well nigh endless, and in shapes and sizes of the flowers there are everything one can wish for.

The Laelio-Cattleyas are indispensable where orchids are grown for cut flowers, as many flower at times when the species do not.

CYPRIPEDIUM (LADY SLIPPER ORCHID)

The following list of Cypripediums is without doubt the largest and most varied collection of these plants carried by any commercial house in America. Nothing in the entire Orchid family offers such a great number of species, varieties and hybrids as do the Cypripediums. They are a constant source of interest to the cultivator.

The flowers when cut will outlast anything else we know, and besides they are the easiest orchids of all to grow, with few exceptions. In ordering please use number in left margin, and give number of list.

CYPRIPEDIUM—Continued

Selenipedium Section

These are so distinct in regard to habit of the plants, colors and shapes of the flowers, that they really form a separate group and we have listed them below, apart from the others. Many of them have long, ribbon-like petals, and all produce a number of flowers on tall scapes, one after another. It is thus possible to have these plants in flower for a long time, for as soon as one flower drops, another takes its place.

The colors of many are white, or nearly so, others rose pink to purple, while some are green, suffused with yellow and purple. They are of easiest culture and form handsome and stately subjects in the greenhouse or conservatory when in flower.

BOOKS ON ORCHIDS

During and since the war, books on orchids have not been available, except a few copies. We have a copy of each of the following listed below which we offer subject to being unsold when ordering. We may be able to secure others from time to time, but we cannot tell at present what they will be. Hence, we advise prospective customers for books on orchids to write us and if we have any on hand we will be glad to state the kind of books we have and prices of same. "Manual of Orchidaceous Plants," by James Veitch & Sons. Freely illustrated with woodcuts and maps. 2 vols., cloth 8vo. One set only, price \$75,00. The above has always been and is now

a classic on orchids.

"The Orchid Stud Book," by Robt. Allen Rolfe and Charles Chamberlain Hurst. An enumeration of Hybrid Orchids of artificial origin, with their parents, raisers, date of first flowering, etc., with an historical introduction and a chapter on hybridizing

and raising orchids from seed, \$7.50.

"The Orchid-Grower's Manual," by B. S. Williams. 8vo., gilt edge, cloth, 300 illustrations. Descriptions of all kinds of orchids and

general cultivation. One copy only, price \$20.00.

"American Orchid Culture," by Prof. Edward A. White, 228 pages, eight handsome four and five color plates and scores of teaching illustrations, bound in a highly attractive cover, stamped in gold, \$4.50.

HOW TO KEEP CUT ORCHIDS

Orchids as a whole keep longer cut or on the plants than most other flowers. This is due to the presence of mucilage in the flowers. The question, however, is very often asked, how can I keep my orchids after they are cut?

In answer to this, the following will probably be useful. If you have orchids in your greenhouse cut the flowers in the morning or late in the evening. Never cut them when the sun is full on the glass. Place them in cold water in any place free from gas and where the temperature does not exceed 60 degrees. Leave the flowers in this position for several hours before using them. Whenever practical use an earthenware vase instead of glass or metal. When the flowers are used on the table, and they have served the purpose, remove them and place them as indicated above in and earthenware vase, and in a temperature of minimum 56 degrees, maximum 60 degrees. The next time after the flowers have been used cut off the lower part of the stem 1-15 of an inch, and replace in water. Never subject your flowers to a low temperature. They are tropical and cannot stand cold with impunity. If you follow these instructions you will be able to enjoy your orchids much longer than in any other way.
